Create a city's identity

Urban

SoleCity

What makes a city unforgettable?

What makes it charming?

The answer resides in its identity

We understand that the identity of a city and the needs of its residents are to be taken seriously. We know you want uniformity in design, optimum style, superior performance but also energy efficient and sustainable products. For this reason, we have created **Lumec SoleCity LED urban luminaires**, a comprehensive line of high efficiency, outdoor LED lighting solutions. The SoleCity will help create a city's identity and develop city pride with a wide range of products designed with a distinguished, modern, sleek and flawless signature style.

Urban

SoleCity

At a glance

A World of possibilities

Our selection of SoleCity products fulfills the different needs of your projects, as different products have different functions. Lighting a walkway in a park, for example, is totally different than lighting a picnic area for families to gather. Different installations, different needs, different lighting products, one solution: the SoleCity Collection.

The freedom to choose your design

The freedom to modify some details. The freedom to create different ambiances. Too good to be true? This is exactly what you can expect from the SoleCity Collection. SoleCity not only offers a complete line of high-performance outdoor LED products, but they can be fully customized to make them even more special for your different urban projects. With SoleCity, the opportunity to create unique designs with different ambiances becomes a reality.

Expect comfortable nighttime

Thanks to the optional frosted lens, you can now enjoy a nighttime walk and expect visual comfort. The optional lens helps eliminate glare to increase visual comfort for an enhanced user experience in pedestrian applications. The optional frosted lens is available in the LED mid-pole light, LED light column and the LED bollard.

Get connected for even more possibilities

SoleCity luminaires easily integrate with a full range of control options, from simple to advanced. The entire collection can be controlled individually or communicate with networked lighting systems to, offering ease of management and significant savings.

Multiple products, one signature style

SoleCity includes distinct LED outdoor lighting products, in 3 categories: street and area LED lighting, functional and ambience LED lighting, and architectural LED lighting.

These lighting solutions offer coherent design and flexibility to fit perfectly in different types of applications, whether your project is standard or not. Multiple items to choose from, to revolutionize the way public spaces are furnished and facilitate all rejuvenation projects.

SoleCity LED street & area

SoleCity LED street & area luminaire small and medium

The SoleCity LED street and area luminaire (small or medium) is an appropriate lighting solution for residential areas or city streets. It has been designed for streets and areas requiring medium intensity lighting, to large urban boulevards. Optimized optic systems generate the required amount of light in order to ensure security at night.

- Luminaire accepts 2 to 5 LED modules to adapt to different light applications and different mounting heights.
- Easily adaptable with led mid-pole and LED flood light offering customization capabilities to create different ambiances.
- Poles are available in steel and aluminum and are suited for harsh environments.
- The bracket and luminaire were designed with a 3° tilt for simplified installation.

SoleCity LED mid-pole light

The SoleCity LED mid-pole light is an option available with the LED street and area luminaires. It allows you to light residential areas, city streets, sidewalks, walkways, bike paths and public areas. It has been designed for installations that require uniform and efficient lighting. The LED mid-pole light creates horizontal and vertical illuminance, and is perfectly integrated in the poles of the LED street and area luminaires. Lighting is only on one side, in the opposite direction of the luminaire.

- **Creates horizontal and vertical illuminance to the ground and surroundings with minimal uplight.**
- **Vertical lighting provides better facial recognition and enhance a sense of security at night.**
- **Seamless design with LED module integrated to the pole.**
- **Available with uplight deflector optimizing the luminous flux to reduce light pollution.**
- **Accepts 2 LED modules to adapt to different light applications and needs.**

Optional frosted lens is available to help eliminate glare and increase visual comfort for an enhanced user experience.

SoleCity LED flood light

Architectural LED Lighting enhances the best in buildings, streets and landscaping. Flood lights are a great way to project a high level of light to a specific outdoor area for safety and security reasons, or simply to highlight architecture elements. The SoleCity LED flood light is a dynamic outdoor unit. It was designed to be harmoniously integrated or installed unto the luminaire pole. Its refined, modern, elongated form will blend well into any surroundings.

- **Various precision optical systems are available, delivering a suitable pattern for any application.**
- **The distributions will place the intended target in its best light, free from streaks or striped effects.**
- **360° attachment to swivel in all directions for maximum flexibility.**

Optional frosted lens is available to help eliminate glare and increase visual comfort for an enhanced user experience.

SoleCity LED light column

Creating ambience with lighting is achieved by using different methods to illuminate an area, a street or a park. You can create a mood or alter the atmosphere to make it warm, inviting and secure. The SoleCity LED light column is great for residential streets, parks, paths and sidewalks as well as public areas. It has been designed for areas requiring medium intensity lighting. It is also used to create ambience lighting.

- Customizable by choosing amongst a variety of different decorative plate finishes.
- Creates horizontal and vertical illuminance and is available with lighting on one or both sides (symmetrical and asymmetrical lighting).
- Better light control, which is perfect to create ambience and give a more authentic look to architecture.
- Available with uplight deflector optimizing the luminous flux to reduce light pollution.
- Luminaire accepts 2 to 4 LED modules to adapt to different light applications and needs.

SoleCity LED bollard

Optional frosted lens is available to help eliminate glare and increase visual comfort for an enhanced user experience.

The SoleCity LED bollard is ideal for sidewalks, parks, walkways, bike paths, public areas and building entryways. It has been designed for areas requiring medium intensity lighting, and can be also used to create ambience lighting. It can add a touch of glamour, a hint of magic and more beauty to any project.

- Customizable by choosing amongst a variety of different decorative plate finishes.
- Creates horizontal and vertical illuminance and is available with lighting on one or both sides (symmetrical and asymmetrical lighting).
- Better light control, which is perfect to create ambience and give a more authentic look to architecture.
- Available with uplight deflector optimizing the luminous flux to reduce light pollution.
- Luminaire accepts 1 to 2 LED modules to adapt to different light applications and needs.

With the complete SoleCity collection, the outdoors never looked so good

See how rejuvenating public spaces with the **Lumec SoleCity LED urban luminaires** is convenient, effortless and so accommodating.
