Device Interface Documentation

Interfaces	Description																						
Zigbee	Refer to Zigbee 3.0 standards																						
DALI	Refer to DALI 2, D4i standards: Parts 101, 102, 103, 202, 207, 209 (DT8), 351 (Type D), 251, 252, 253																						
BLE	<p>GATT Services</p> <table border="1"><thead><tr><th>Name</th><th>Descriptions</th></tr></thead><tbody><tr><td>Generic Attribute Profile Service</td><td>Bluetooth 5.2 spec defined service, to indicate changed state of services.</td></tr><tr><td>Generic Access Profile Service</td><td>Bluetooth 5.2 spec defined service, to determine the device name.</td></tr><tr><td>Device Information Service</td><td>Bluetooth 5.2 spec defined service, to determine the manufacturer, model name and software version of the device.</td></tr><tr><td>Device Configuration Service</td><td>Signify defined service that includes characteristics to get more information about the device, e.g. device identity etc.</td></tr><tr><td>Security Service - GATT service</td><td>Signify defined service that is used for security related features of a device (such as device claiming, authentication, key exchange etc.)</td></tr><tr><td>Factory Reset Service</td><td>Signify defined service that allows to do a factory reset or a reboot of the device.</td></tr><tr><td>Light Control Service</td><td>Signify defined service that includes characteristics to control the light devices e.g. On/Off, Identify.</td></tr><tr><td>SmartBridge Tunnel Service</td><td>Signify defined service which provides functionality to tunnel the SmartBridge protocol over BLE. This protocol is used as an interface to the Zigbee platform implementations used in Signify products.</td></tr><tr><td>OTA Service</td><td>Signify defined service which allows OTA (Over-The-Air) upgrade of the firmware of a device over BLE.</td></tr><tr><td>Approbation Test Service</td><td>Signify defined service which allows to trigger approbation tests for the device.</td></tr></tbody></table>	Name	Descriptions	Generic Attribute Profile Service	Bluetooth 5.2 spec defined service, to indicate changed state of services.	Generic Access Profile Service	Bluetooth 5.2 spec defined service, to determine the device name.	Device Information Service	Bluetooth 5.2 spec defined service, to determine the manufacturer, model name and software version of the device.	Device Configuration Service	Signify defined service that includes characteristics to get more information about the device, e.g. device identity etc.	Security Service - GATT service	Signify defined service that is used for security related features of a device (such as device claiming, authentication, key exchange etc.)	Factory Reset Service	Signify defined service that allows to do a factory reset or a reboot of the device.	Light Control Service	Signify defined service that includes characteristics to control the light devices e.g. On/Off, Identify.	SmartBridge Tunnel Service	Signify defined service which provides functionality to tunnel the SmartBridge protocol over BLE. This protocol is used as an interface to the Zigbee platform implementations used in Signify products.	OTA Service	Signify defined service which allows OTA (Over-The-Air) upgrade of the firmware of a device over BLE.	Approbation Test Service	Signify defined service which allows to trigger approbation tests for the device.
Name	Descriptions																						
Generic Attribute Profile Service	Bluetooth 5.2 spec defined service, to indicate changed state of services.																						
Generic Access Profile Service	Bluetooth 5.2 spec defined service, to determine the device name.																						
Device Information Service	Bluetooth 5.2 spec defined service, to determine the manufacturer, model name and software version of the device.																						
Device Configuration Service	Signify defined service that includes characteristics to get more information about the device, e.g. device identity etc.																						
Security Service - GATT service	Signify defined service that is used for security related features of a device (such as device claiming, authentication, key exchange etc.)																						
Factory Reset Service	Signify defined service that allows to do a factory reset or a reboot of the device.																						
Light Control Service	Signify defined service that includes characteristics to control the light devices e.g. On/Off, Identify.																						
SmartBridge Tunnel Service	Signify defined service which provides functionality to tunnel the SmartBridge protocol over BLE. This protocol is used as an interface to the Zigbee platform implementations used in Signify products.																						
OTA Service	Signify defined service which allows OTA (Over-The-Air) upgrade of the firmware of a device over BLE.																						
Approbation Test Service	Signify defined service which allows to trigger approbation tests for the device.
